

**GT-ENMD-00**  
**Network Enterprise Management Platform**

The GT-ENMD-00 is a robust enterprise management platform designed for IT and AV professionals. It enables seamless deployment, configuration, and management of comprehensive Pro AV installations from any location within the network. Supporting third-party devices, this platform enhances operational efficiency and simplifies system administration, making it ideal for modern AV environments.

**Feature:-**

- **Centralized and Distributed AV Routing:** Easily manage virtual and physical matrix routing.
- **Efficient Device Management:** Instantly detect and configure any IP device on the network.
- **Firmware Management:** Track and update device firmware centrally with one click notifications.
- **Enhanced Security:** Utilize LDAP authentication and user management for tiered access levels.
- **Maestro Room Automation:** Automate room elements with an intuitive interface and extensive triggers, reducing prep time and errors.
- **Detailed Site Topology:** Visualize and drill down into specific locations.
- **Subnet Device Scanning:** Discover devices across different subnets.
- **Video Wall Management:** Customize monitor configurations and identify screens effortlessly.
- **Proactive Notifications:** Receive alerts about system issues through email.
- **Customizable Scripts:** Enhance system functionality with tailored scripts in various programming languages.
- **System Optimization:** Log events for usability analysis and future enhancements.
- **Quick Setup:** Get started in minutes without programming requirements.
- **Integrated Scheduling:** Synchronize with Outlook for room management.
- **MultiLingual Support:** Available in multiple languages.
- **Online Help:** Access support resources easily.

Category	Specification
Inputs	Ethernet: On RJ-45 connector
Device Management	Auto-detection
User Interface	Web-based interface with live video preview
Power Source	12V DC
Security Features	LDAP user authentication
Firmware Management	Centralized updates with notifications
Room	Maestro for automating meeting room elements

Automation	
Supported Protocols	Compatible with API commands
Device Scan Capability	Scan across multiple subnets
System Optimization	Event logging for reporting and analysis
